November 23, 2020
State issues RFP for
medical cannabis
companies

September 21, 2022
Issued license and
authorized to begin
manufacturing by the GMCC

Frequently Asked Questions

How to get a card?

First, consult with your or one of our participating physicians. Then, you or your caregiver's information will be entered into the Department of Public Health's secure Low THC Oil Registry and a card will be issued. For more information, visit [BotanicalSciences.com](https://www.BotanicalSciences.com).

What products will be available?

Our products will be available in tincture, capsule, and topical forms. Each formulation will contain a customized blend of cannabinoids designed to provide the maximum relief possible.

Is CBD oil the same as medical cannabis?

Medical cannabis products may contain both CBD and THC, whereas CBD oil typically contains only CBD. In Georgia, low-THC oil with a maximum 5% THC is classified as medical cannabis.

Is medical cannabis covered by insurance?

Currently, insurance does not cover medical cannabis. However, assistance options will be available for those who are eligible.

What Separates Botanical Sciences from Other Companies?

At Botanical Sciences, we pride ourselves on having one of the most advanced growing and production facilities in the industry. We have invested heavily into state-of-the-art design, equipment, mechanical systems, and workflows to ensure the highest quality medical cannabis. As a vertically integrated, seed to sale provider, we cultivate, process, distribute, and dispense medical cannabis of the highest purity, quality, and consistency.

Through a unique extraction process and distillation system, we produce the cleanest form of THC oil—nearly odorless and tasteless. Our cannabis oils have a level of purity that makes them easier for patients to ingest and metabolize, so they can experience real relief.
